

NEEDLESTICK RESISTANT GLOVES

HexArmor® 4041 NSR (Needlestick Resistant)

HEX4041 Sizes S-XXL

FEATURES

- Uses 3 layers of the highest sharps (needlestick) protection technology available
- EN388 cut level 5
- Good dexterity
- Specialised gripping surface on palm
- Durable and long lasting
- Machine washable

APPLICATIONS

- Prisons
- Customs Officers
- Luggage Search
- Hospital Waste/Laundry

Hercules™ NSR (Needlestick Resistant)

HEX3041 Sizes S-XL

FEATURES

- EN388 cut level 5
- Highest puncture protection available
- Full coverage protection
- High dexterity
- Padded knuckle for extra protection on back of hand
- Specialised grip on palm

APPLICATIONS

- Waste Recycling and Sorting
- Wastewater Treatment/Sewage
- Hospital Waste Handling and Laundry
- Animal Handling

Hercules™ R8E (Needlestick Resistant)

HEX3180 Sizes M-XL

FEATURES

- Uses 3 layers of the highest sharps (needlestick) protection technology available
- EN388 cut level 5
- Full protection for the entire hand and forearm
- Pre-curved shape provides maximum comfort
- Specialised gripping surface on palm for enhanced grip
- Fully lined interior
- Machine washable/sanitisable

APPLICATIONS

- Waste Recycling and Sorting
- Wastewater Treatment/Sewage
- Hospital Waste Handling and Laundry
- Animal Handling

8" Arm Guard 8TW (Needlestick Resistant)

HEXAG8TW Sizes S-XL

FEATURES

- EN388 cut level 5
- Highly puncture resistant from needles, nails, glass, metal, splinters etc
- Comfortable, will not fall down like knit sleeves
- Reduce costs: lasts 10-15 times longer than typical protective wear
- Machine washable and sanitisable

APPLICATIONS

- Waste Recycling and Sorting
- Wastewater Treatment/Sewage
- Animal Handling

CUT RESISTANCE

HexArmor[®] products use SuperFabric[®] brand technology, which provides protection against cuts and slashes like no other material in the world. Cut protection is provided by the tough, hard guard plates that are adhered to high performance fabrics. It is engineered to provide high levels of protection from very sharp objects such as knives, razor blades and glass. When you need high cut resistance, reach for HexArmor.

PUNCTURE RESISTANCE

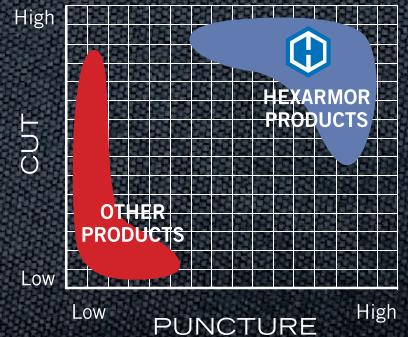

Due to their inherent construction, conventional materials such as cotton, leather, aramids and nylons are unable to stop sharp objects from penetrating through the material. HexArmor products, made with SuperFabric brand material, use tiny guard plates that are adhered to high performance fabrics in order to provide superior puncture protection.

NEEDLESTICK RESISTANCE

HexArmor provides industry leading needlestick resistance. Because the gap between the SuperFabric guard plates is so small, and because we use multiple layers, HexArmor products deliver the highest levels of protection from sharp objects such as needles. As a sharp hazard enters the fabric, it is arrested by one or more layers of fabric as it strikes the guard plates.

The highest level of protection is provided from the three-layered SuperFabric. While the products with one layer provide some needlestick resistance, they are not recommended for use with needle hazards. However, many of our needlestick products are recommended for use with other sharp hazards such as wire, metal, fine glass and metal shavings.

Some products give you protection from cuts. Others might give you modest protection from sharps and punctures. HexArmor delivers industry-leading puncture protection along with the highest levels of cut protection. Only HexArmor utilises patented SuperFabric material for the highest possible protection. If your employees encounter hazards such as sharps, blades, knives, metal shards, and wood splinters, give them the armor they need.

SuperFabric brand

by HDM Inc[™]

When is a glove more than just a glove? When it has the **Armor Inside[™]**. HexArmor gloves have a hidden layer of SuperFabric sewn into the palm, delivering unparalleled performance. Once you know the inside story, you'll never reach for another glove again.

HexArmor products are cut and puncture resistant, not cut and puncture proof. Always conduct a safe test with your application to determine if the product is suited for your needs.
